

Water Source

We obtain water from the artesian aquifer via eight wells. These wells are located around the Village Water Treatment Plant. Our plant produces water that has been aerated, filtered, and disinfected providing excellent quality and exceeding all Federal, State and Local drinking water standards. The Village of Indiantown Water & Wastewater Utility currently distributes 400,000 to 500,000 gallons per day of drinking water to its customers provided by our Water Treatment Plants.
