

Reuse Water

Keeping the environment “green” and local industry on the grow, the Village Water & Wastewater Utility water reuse program offers both the capability and the capacity for a flourishing future in Indiantown. Our successful water reuse program creates highly treated domestic wastewater for use in irrigation, environmental restoration, and industrial purposes such as cooling and processing.

The Village water reuse facility treats water to near-drinking water standards, ensuring a high degree of cleanliness for the water that is returned for these non-drinking purposes. Water reuse makes good environmental sense, but it’s also an important industrial asset, insuring a stable, cost-effective water supply. This is due to reuse water being exempt from certain year-round conservation measures and from any emergency water shortage restrictions. With a 1.5 million gallon available capacity, the facility is ready to pour on the performance for Indiantown industry.
